US Metabolic Product Supply Update from Nutricia: Products for Phenylketonuria (PKU)

Dear Metabolic Community,

As you may be following, like many companies, Nutricia has been facing unforeseen supply issues in getting ingredients and packaging. These supply shortages have been preventing us from producing and maintaining an adequate stock of certain **PhenylAde** brand PKU formulas. We are doing everything we can to resolve these challenges and make sure you and your loved ones have access to these critical formulas.

Unfortunately, we are now faced with a very limited availability of key ingredients and materials, forcing us to make very tough production decisions. It is unclear at this time how long this situation will last. **Please see Table 3 below** for more details on affected products and timelines. Please know that we are working hard with our suppliers and the US government to find a solution to this pressing issue.

Nutricia products for other disorders or conditions than PKU are not impacted by these issues.

We deeply regret how these supply challenges may affect you and are not taking these decisions lightly. We commit to updating you as the situation changes. If you cannot access your preferred metabolic formula, please work with your healthcare professional to find product alternatives. If you have any product questions, we can be reached at NutritionServices@nutricia.com or call 1-800-365-7354 (8:30 am – 5:00 pm ET).

Sincerely,

Your Nutricia Metabolics Team
